

Tranquil

Your daily meditation helper

Exploring a social network for Tranquil meditation app

Tranquil - the meditation app!

- **Tranquil** is one of the leading meditation apps in *India* that offers users features that help users practice various meditations like *mindfulness meditation, guided meditations, breath awareness meditation* etc. The app is available in both android and iOS formats.
- Tranquil has recently *integrated with wearables* (fitbits, smartwatches etc.) to help *track various body vitals* during meditation. This has been a great hit and users love correlating body vitals as they meditate.
- The company is now **exploring to build a social network for its 'meditators'**. The document below explores the possibility of the same and a product requirement document if the social network is to be built.
- These are the business goals that Tranquil has for its social network of meditators -
 - *Community Building* - create a sense of belonging for its meditators
 - *Increased User Engagement* - this social network will increase engagement of users with the core features of Tranquil
 - *User Generated Content* - This content related to meditation from its own users will help Tranquil its next steps in building new features for meditation

Does Tranquil actually need a social network? (Part 1)

Let's look at the major factors that drive social media and why people stay active on such apps -

- Record of achievements and/or Appreciation expectation
- Social Pressure
- Help and Daily motivation for a common goal

From the point of view of meditation app Tranquil, let's understand these major factors -

- *Record of achievements and/or appreciation expectation* - Showcasing what you are good at is a common tendency. People showcase their professional achievements on LinkedIn, social achievements (no. of friends, travel etc.) on Instagram. The urge of doing so is common in the age group of 15-30. Meditation has proven benefits that meditators would want to showcase. However, adults in the age group 45-65 are more likely to practice regular meditations than any other age group.
- *Social Pressure* - A common reason why many people start using social media is social pressure. Within a circle, the circle being together due to a common cause/reason, if a majority of the group joins an app, others in the group will also join to stay 'active' within the circle. (I personally joined Instagram because all my friends did.). Here, the first requirement for a social media app to grow rapidly is for majority people to first use the app only then can the community effect be used.
- *Help and Daily motivation* - The main reason for staying within a community, particularly for new members of the community, with a common goal is to derive value and inputs from within a group. Activity on a community driven social media app provides help and daily motivation that the users seek.

As mentioned earlier the business objective for Tranquil to build the social network - Community Building, Increased User Engagement, User Generated Content.

Does Tranquil actually need a social network? (Part 2)

Let's look at some numbers -

- Around 80 million people in India practice meditation (avg. 4-5 sessions) in a month ([Link](#))
- Meditation apps market in India is expected to grow at a CAGR of 14.39% (2023-2027) ([Link](#))
- Currently there are close to 2 million meditation app users in India (2023) ([Link](#))
- Headspace, Calm, Daily Yoga already control 70% of the market ([Link](#))

Based on the factors mentioned in the earlier slide - appreciation expectation, social pressure and daily motivation, it is clear that to drive initial user engagement it is necessary to have enough content which is again driven by users. Assuming that -

- Assuming that Tranquil is a smaller app, having less than 5% of the existing market, it would have around 1 lakh users. Given that the app is not well known in the market, the initial adoption of the new social network adoption will also be low (assume 5%). This would mean around 5000 user producing content.
- Assuming that Tranquil is a larger player in the market, say similar to Headspace, it would have around 8 lakh users (~40%). In this case the adoption will also be relatively higher (~20%), given that the app is already popular. This would mean 1.6 lakh users producing content.

Given that the social media success will majorly be driven by user generated content and communities being built by initial users, if Tranquil is a smaller player, then it will have to infuse a lot of content on its own to drive initial engagement.

Who will be using Tranquil's social network?

Ajay (*Progress Tracker*)

- Ajay is a software engineer in Bangalore who practices meditation to get some relief after his 9 to 7 job.
- Ajay is a data driven individual and he has done meditation before but he would now like to improve on his meditation skills and track its effect on his health.
- **Motivations -**
 - Wants to track meditation consistency
 - Tracking Heart rate pattern and other health metrics being improved by meditation
 - Track progress compared to other meditators and learn from them
- **Goals -**
 - To connect with other meditators
 - Daily reminders for meditation and progress report
 - Tips on improving meditation

Sunita (*Enthusiastic Meditator*)

- Sunita is an HR professional and a passionate meditator and has been practicing meditation for several years now.
- Sunita wants to find out what's next in her meditation journey and at the same time help others improve their meditation skills in any way she can
- **Motivations -**
 - Seeking a community to share insights on meditation
 - Inspiring others and helping them improve their meditation practice
- **Goals -**
 - Share insights on meditation
 - Engage in discussions
 - Connect with other enthusiastic meditators/ meditation coaches

Who will be using Tranquil's social network?

Tulika (*Community Seeker*)

- Tulika is a designer by profession and she recently started meditation but is unaware of what the next steps are.
- Tulika has found that she is not very consistent when it comes to maintaining her health and wellbeing. She is looking out for support for the same.
- **Motivations -**
 - Finding a welcoming community
 - Seek recommendation and support from others to stay consistent with meditation
- **Goals -**
 - Beginner meditation tips and help
 - Connecting with other meditators who are experts

Pramod (*Meditation Coach*)

- Pramod is a certified meditation coach who has trained people before.
- Pramod is now looking for ways to share his knowledge with a wider audience. Pramod offers one on one meditation sessions. He is looking to connect with the right audience for the same.
- **Motivations -**
 - To offer valuable content and engage with other meditators
 - Expand reach as a meditation instructor
- **Goals -**
 - Build a following of aspiring and enthusiastic meditators
 - Offer virtual workshops and share meditation related content

Tranquil App - Key user flows and Information Architecture

01

User Login / Registration Flow

02

Home Feed Flow

03

My Profile Flow

04

'Discover' Flow

05

'Challenges' Flow

06

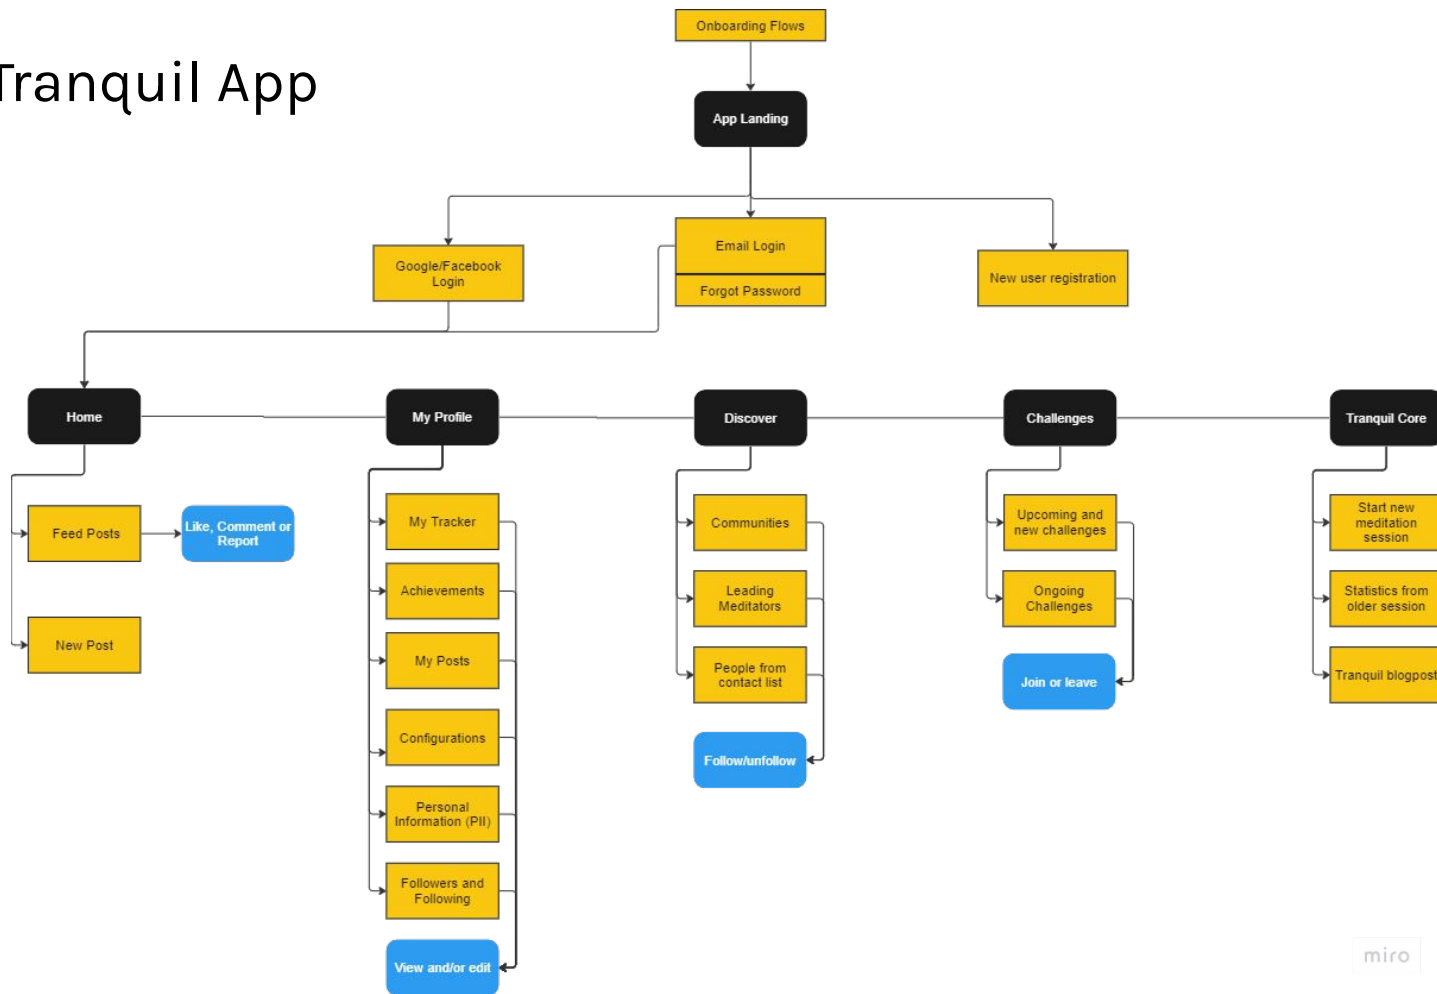

Notifications Flow

07

Tranquil Core App

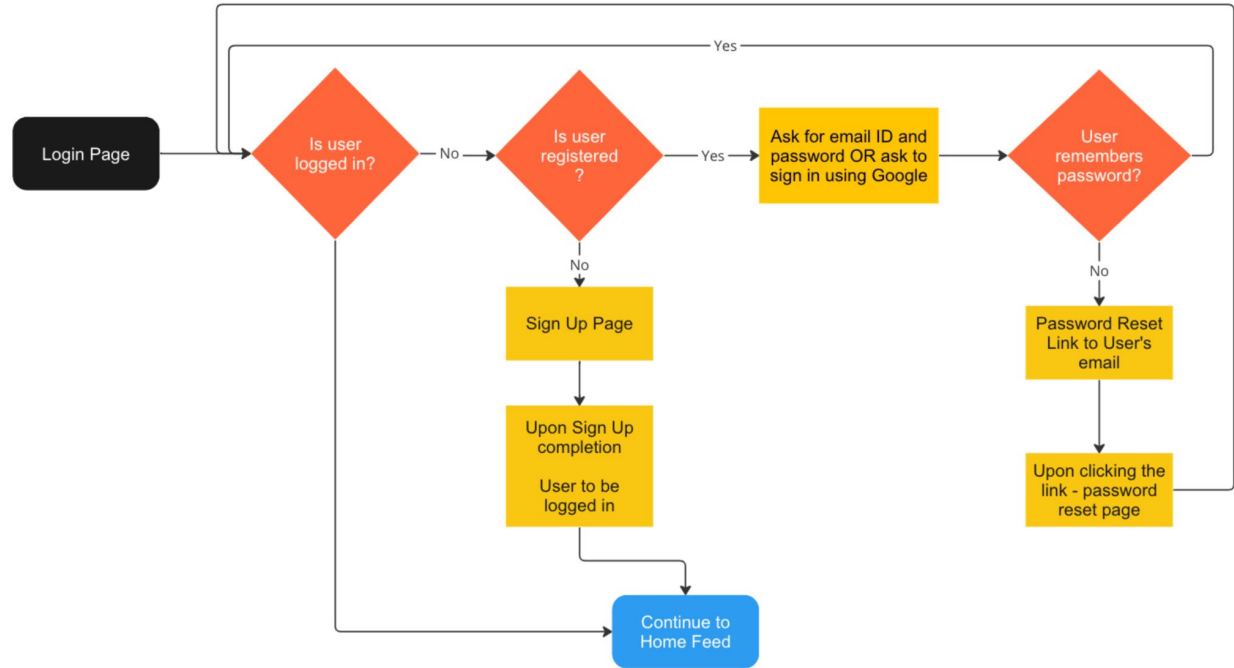

Tranquil App

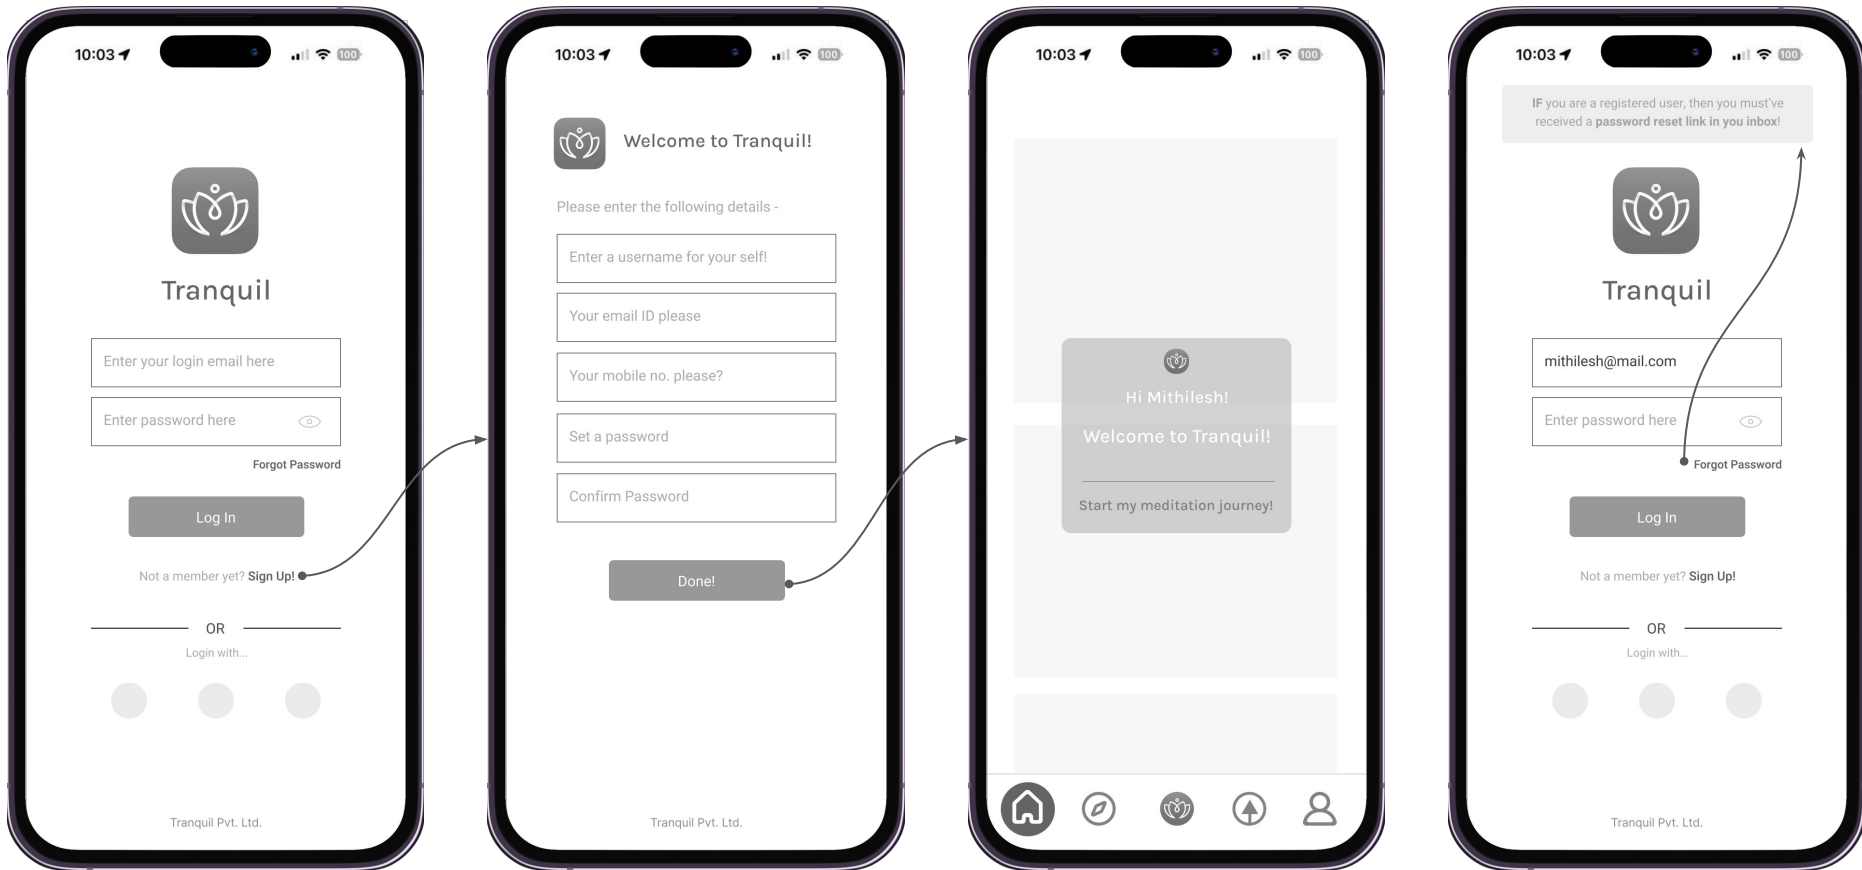

User Login / User Registration Flow

- Any user of the tranquil app will be required to login to continue to our app -
 - If the user is already logged in, they will be taken to the home tab
 - If the user is not logged in, they will be asked for their email and password
 - If the user is not registered, they will be asked to sign up

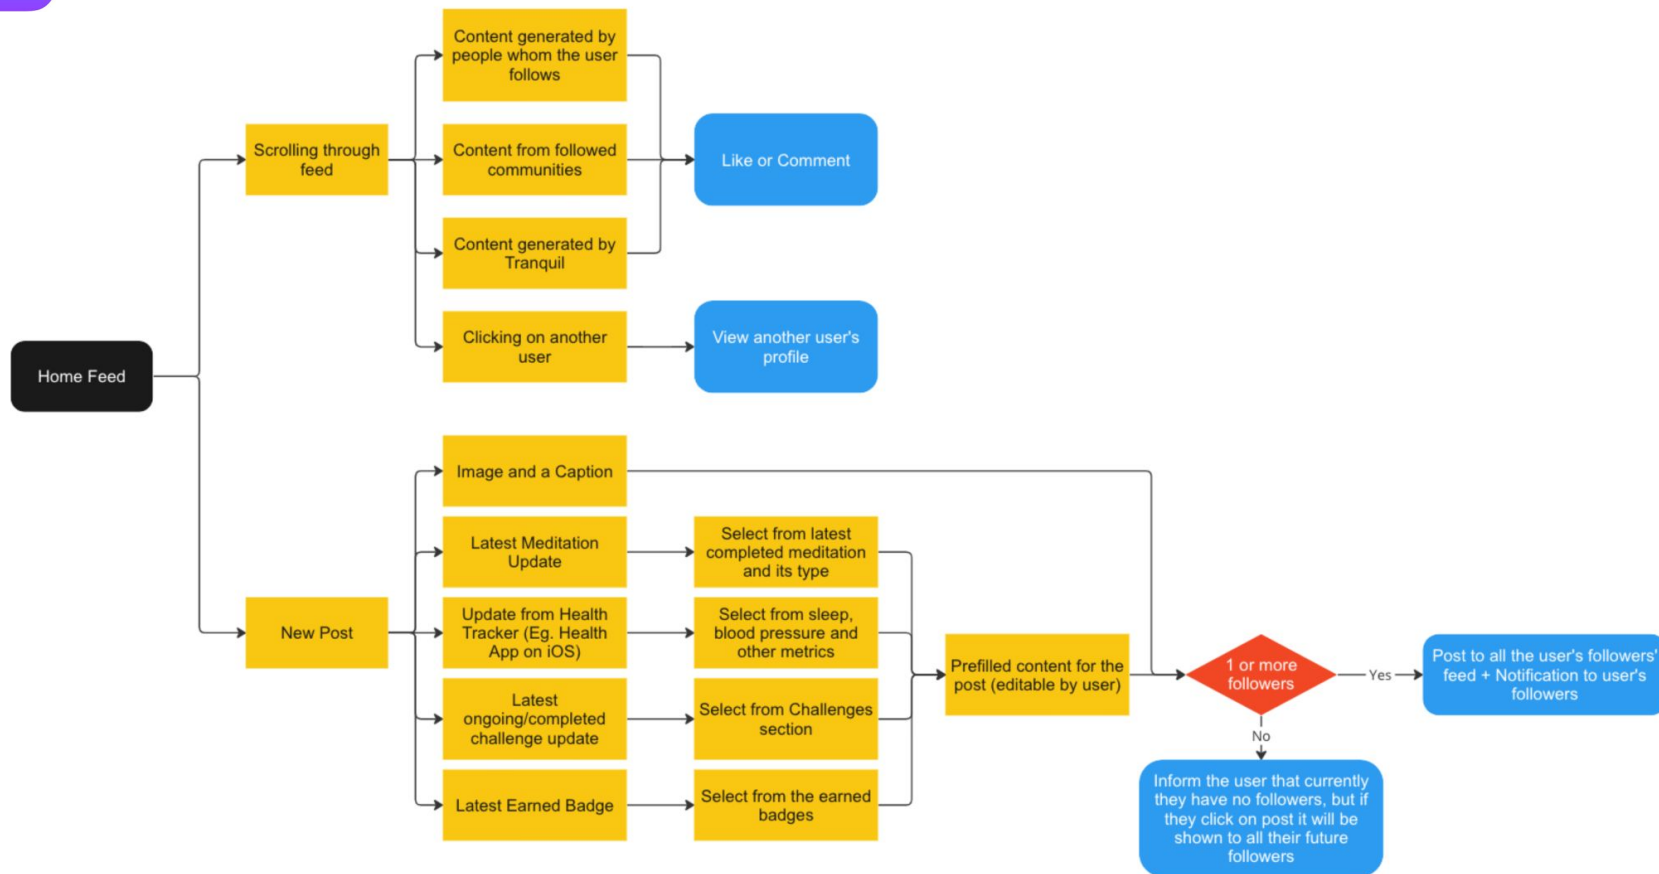

User Login / User Registration Flow

Home Feed Flow

Home Feed Flow (Different types of post formats)

- Note that apart from viewing and posting content under the home feed. A user can also report a post in the home feed by clicking on the 'i' icon in the top right of corner of any post.
- Under New Posts, all types are essentially an image along with a caption. The image depends on the type of post being created. For example - 'Update from Health Tracker' -> 'Sleep chart' -> This will attach an image of the chart in the post.
- During the onboarding of a new user, 'Tranquil' app can suggest following people that the user knows. This can be done via the contact list of the user and finding existing users in Tranquil's database.
- Here are some types of posts that can be shown in the home feed -

Meditation Log / Progress update on vitals:

- *Format:* Text post with timestamp and duration details and graph image
- *Description:* Users can share their daily or weekly meditation logs (type, duration, insights etc.). This can also include showcasing after effects of a meditation session
- *Example Post:* "🧘 Morning meditation complete! Practiced 15 mins of mindfulness meditation today. Heart rate dipped to 62 BPM today during my session, and stress level reduced significantly!"

Discussion Starter:

- *Format:* Text post with a thought-provoking question related to meditation.
- *Description:* Users can initiate discussions on various meditation topics to engage the community in meaningful conversations.
- *Example Post:* "😞 What are your favorite meditation techniques for reducing anxiety? Share your go-to methods below! #MeditationDiscussion #AnxietyRelief"

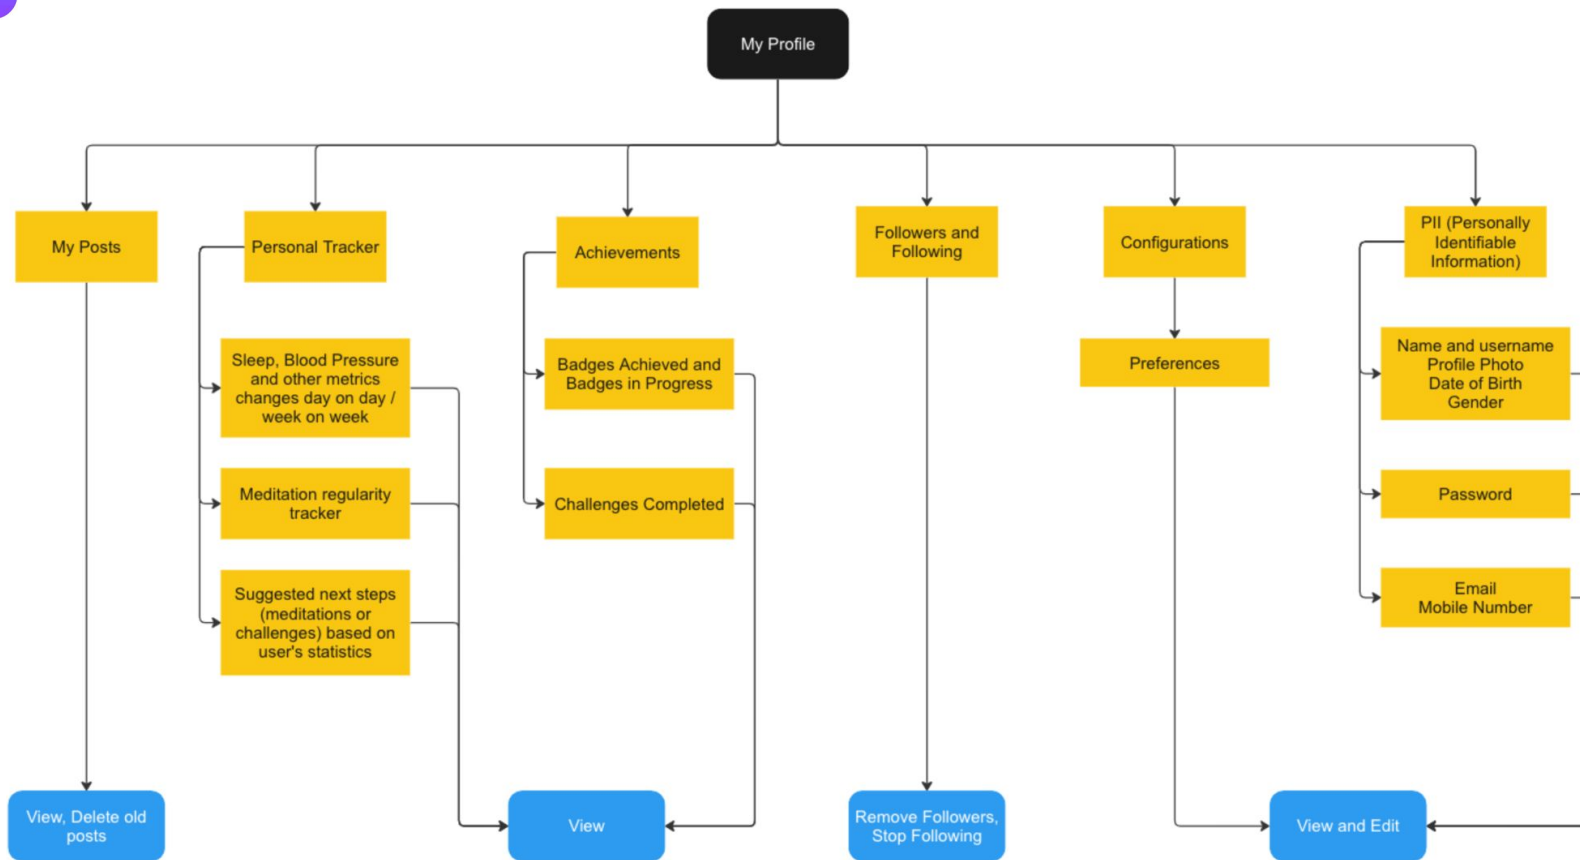

Mindfulness Quote:

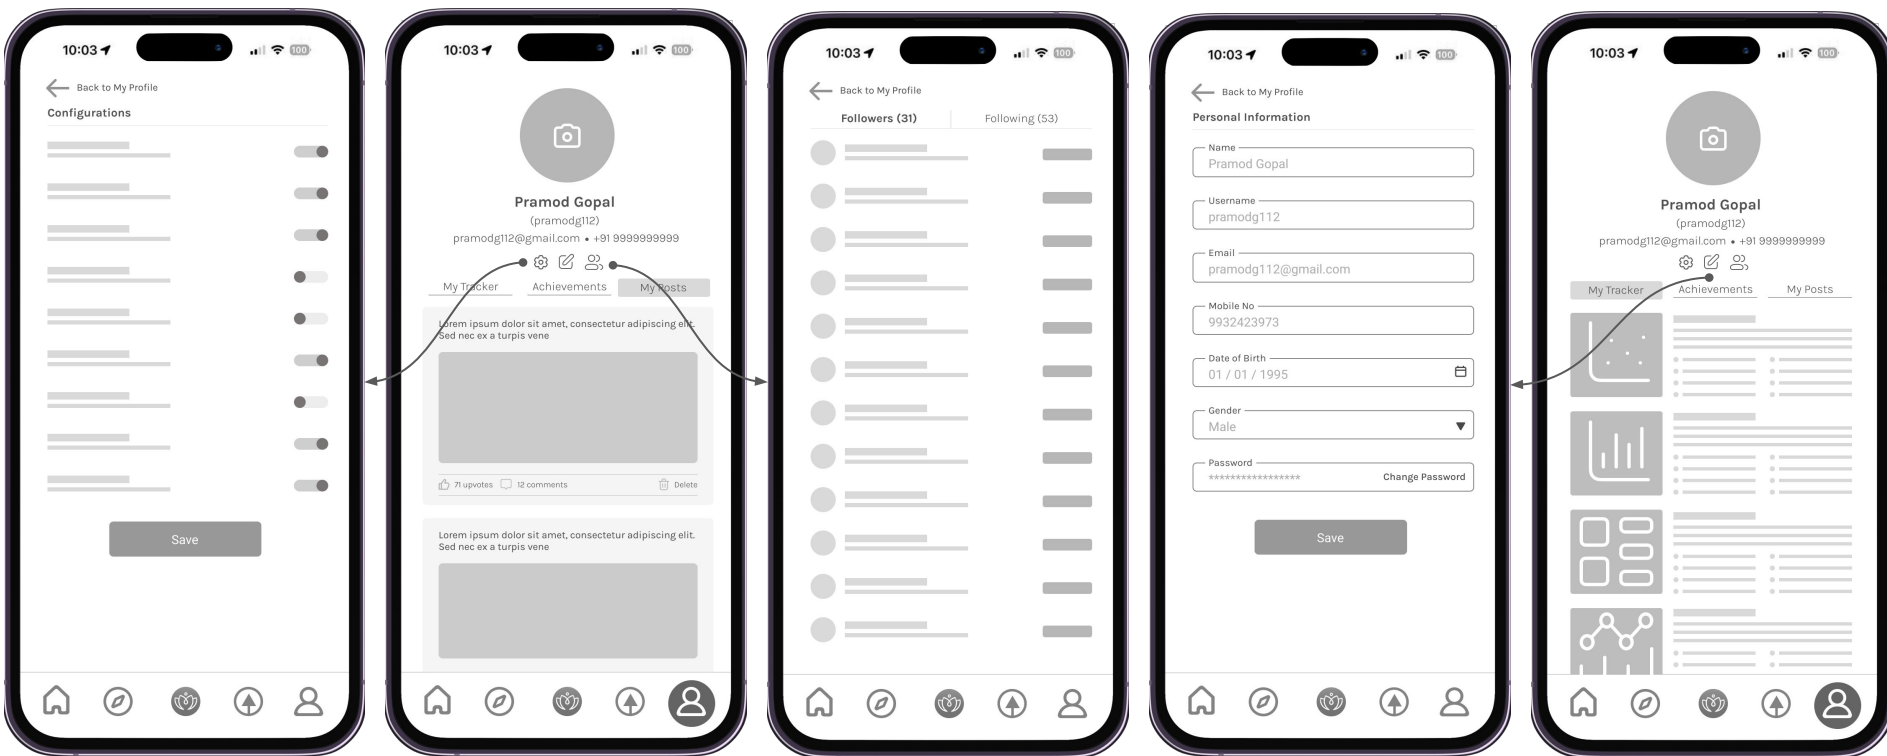

- *Format:* Text post with an inspiring mindfulness quote.
- *Description:* Users can share motivational quotes related to mindfulness and meditation, uplifting the community's spirits.
- *Example Post:* "🌻 'Inhale peace, exhale stress.' Let's remember to find stillness amidst the chaos of everyday life. #Mindfulness #InnerPeace"

My Profile Flow

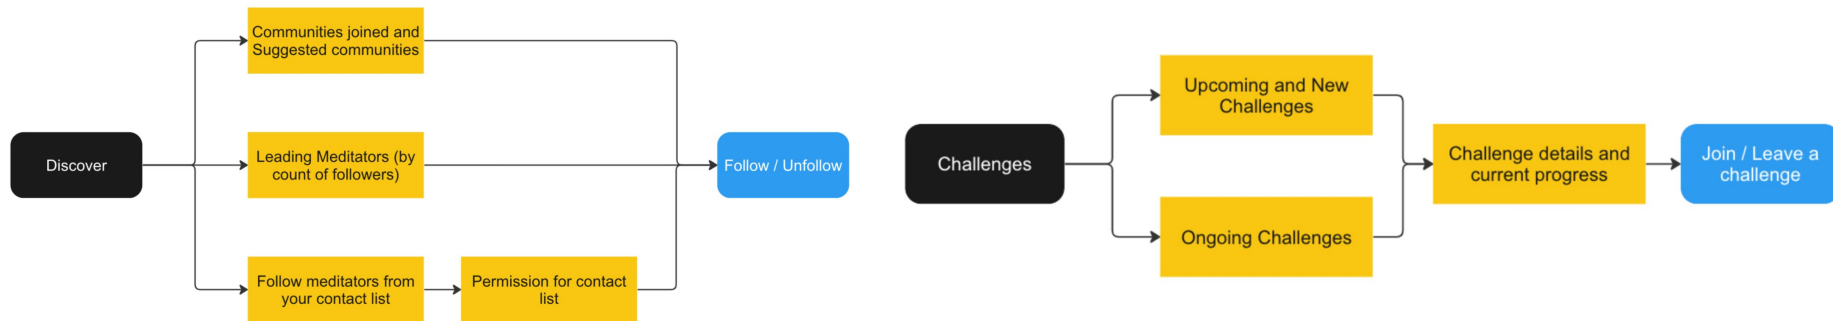

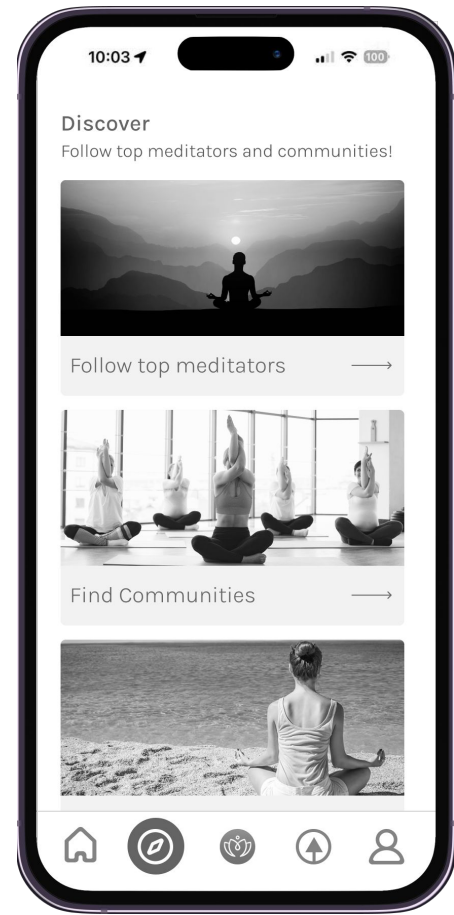

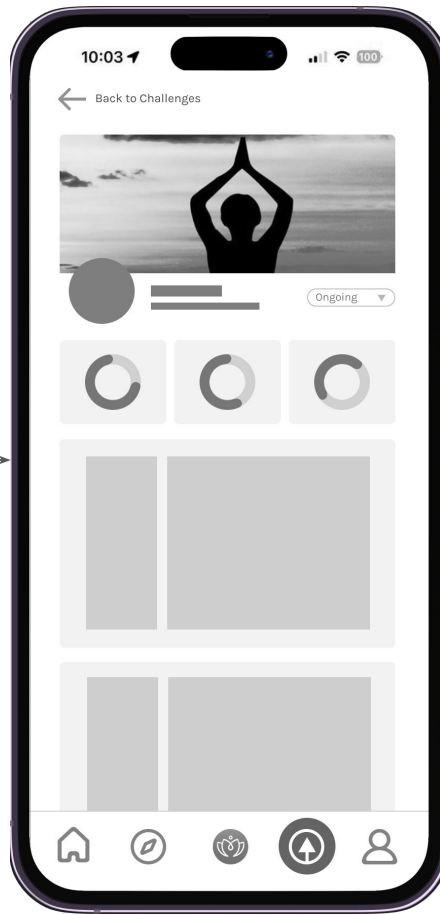

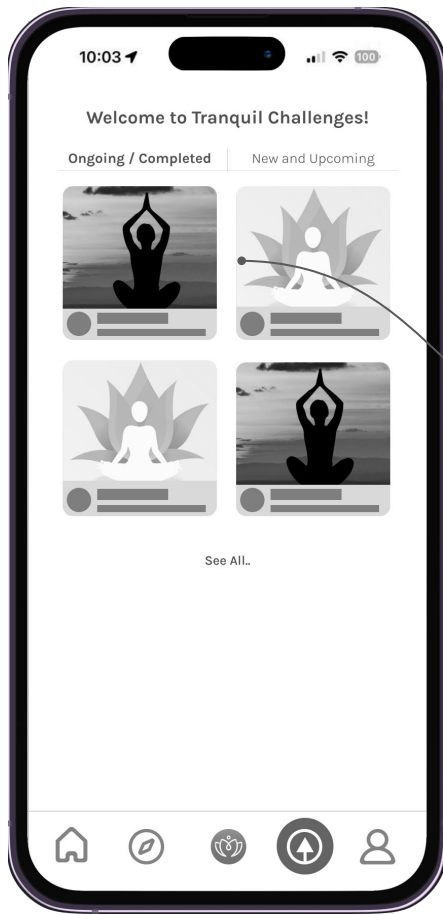

My Profile Flow

'Discover' Flow and 'Challenges' Flow

- Within the Tranquil app, we will be introducing sections called 'Discover' and 'Challenges' to further boost our social network feature.
- While 'Discover' will help users in joining groups, this will further foster a sense of community. On the other hand 'Challenges' will become a driver for daily activity on the app, and posting 'challenge completion status' onto the social network will increase the engagement even more.

My Profile Flow

Notifications Flow and Tranquil Core App

- Following will be the events for which users will receive notifications -
 - A 'New Post' from leading 'meditators' and communities
 - 'New Follower' added to the user's list
 - Notifications related to ongoing challenges
 - Notifications related to badges achieved
 - Meditation reminders
- Additionally the Core Tranquil section is where the current functionality of the meditation app would be moved to. All the features related to the current meditation app - that help users in various types of meditations will be moved to the core tranquil app.
- This will be accessible by clicking on the tranquil logo on the bottom bar center. The core tranquil section will have features for different meditations like guided meditation etc.

Some other aspects of the Information Architecture for Tranquil

- We will be using blog storage mechanism to populate the home feed of the user. The feed will fetch latest 10 blogs at once and once the user scrolls down it will fetch the next 10 items. User will be shown posts from other meditators that they are following. The posts will be sorted by time of creation. A mechanism can be decided later on which can show 'popular' posts first.
- Login functionality with password encryption using SHA (Secure Hash Algorithm) will be used and a hash of the password will be stored along with a password_salt (to differentiate if two users have the same password)
- For cloud service AWS will be used, which can help in autoscaling the resources on important days, for example 'Yoga Day' when Tranquil app can expect a sudden surge in the number of users. For CI/CD we will use CI-Github and CD - Jenkins.
- For tracking API metrics and logging errors, we can use Datadog
- Given that we will be showing data points like PII (personal identifiable information), number of followers etc., we can use caching mechanism for the same. Here we are assuming that the no. of followers changing is not a very frequent event for most of the users.
- User data can be stored in a DBMS (MySQL). Data related to posts or activities from users can be stored on NoSQL database (MongoDB). Multimedia data (for Tranquil app we are considering only images) will be stored on S3 by Amazon, and this will be referenced back to the document data in NoSQL that contains user posts' data.
- [Here is a small sample schema](#) covering user _data, meditation activities and badges of the users on Tranquil app. Note that apart from user generated data being stored, we will be storing audit fields like 'created_at', 'created_by' as well.
- To manage the badges, challenges etc. we will need an Admin side of the Tranquil app.

Key metrics to be tracked

- User Engagement Metrics -
 - MAU/WAU/DAU
 - Avg. Sessions per user
 - Avg. Time per session
 - Activity - Total Likes and Comments
- Community Growth Metrics
 - Avg. Followers per user
 - Total following per user
 - Follower/Following count weekly change
 - Avg. Communities joined per user
 - Avg. Challenges joined per user
- Privacy and Safety Metrics
 - No. of posts reported

A user sentiment analysis can be carried out using user surveys to better understand the success of Tranquil's new social media look.
